

EliteB2IT is Elite Value Solutions’ service for helping businesses identify their strategic objectives and align them with technology solutions through business process management (BPM). BPM refers to introducing, improving and automating business processes to optimize workflow, with the goals of increasing efficiencies, lessening risk and lowering costs.

Why BPM Matters

If you’re like most businesses, you’ve introduced specific processes to streamline the day-to-day activities that occur between your company and its customers, vendors, suppliers, business units, departments, people and systems. But these processes might not perform as efficiently as they could. In fact, they might duplicate certain functionalities and they might ultimately fail to provide the flexibility your company needs to respond to new opportunities quickly.

The solution? BPM. By thoroughly and objectively analyzing your company’s activities and processes, we can help you identify existing processes—and create new ones—to use, optimize and automate in a coordinated environment.

Another way to remember that BPM is the sure way out of system-breakdowns is this quick acronym: “Before Pain Multiplies”.

To help achieve your company’s strategic business objectives, consider EliteB2IT services.

EliteB2IT Features

Undertaking a business-to-IT alignment project can be extremely daunting for companies of all sizes. EliteB2IT’s specialists and portfolio of services can provide the right level of support and assistance to make seamless alignment a reality. Our specialists work closely with your company to identify, introduce and improve your business processes, creating a more efficient and productive environment which meets or exceeds your business objectives.

EliteB2IT offers the following services to help your company achieve business-to-IT alignment through BPM:

SERVICES	DETAILS
Environment Scan and Needs Analysis	Work with appropriate stakeholders across the organization to identify and report on processes which need to be introduced or improved. This helps accomplish business objectives and improve productivity
Implementation	<p>Work with stakeholders to define the business processes and lay them out in documented and visual terms, along with expectations and performance indicators</p> <hr/> <p>Incorporate processes into the environment</p> <hr/> <p>Train staff</p> <hr/> <p>Introduce EliteBPM to integrate and automate business processes</p>
Continuity and Auditing	<p>Define key performance indicators (KPIs) to benchmark value and monitor progress</p> <hr/> <p>Regularly evaluate and refine business processes as needed</p>

Added Value for Your Investment

Elite Value Solutions provides services based on customer need. Pricing is dependent on just those services Elite Value Solutions will deliver to YOUR business—you won't purchase services that you don't need or can't use.

And to stretch your investment further, your EliteB2IT service contract lets you optionally choose to implement our EliteBPM software (with no additional licensing fees). That way you can further integrate staff and systems, automate and manage your processes and manage productivity and expectations among all stakeholders.

EliteB2IT Benefits

Realizing ROI on your business-IT alignment project doesn't have to take an eon. EliteB2IT helps you start reaping the benefits that BPM delivers back to your company more quickly than "going it alone" ever could:

- Improving existing processes and introducing new ones that tie directly to specific strategic objectives enables your company to better meet your objectives
- Tying together disparate processes that occur between people and systems increases business productivity
- Introducing technology solutions that truly achieve business objectives in the most efficient way possible to maximize the value returned from your IT investments
- Creating an environment where change and expectations are communicated and met promotes stakeholder alignment
- Monitoring productivity and business processes continuously and refining them as needed creates the most efficient environment possible
- And operating in an efficient, optimized environment that's aligned tightly with your business objectives best positions your company for growth and innovation
