

EliteBPM is a powerful software tool that helps companies automate business and technology processes. With EliteBPM, businesses can streamline system and people-based processes, automating the collaborations that occur between the business and its vendors, customers, suppliers, business units and departments.

EliteBPM provides the glue between existing systems, giving companies like yours more control and visibility into business activity and productivity. EliteBPM is designed to help you integrate existing processes and systems—not replace software or systems such as ERP. The product adapts to process changes and adheres to software and system changes in the environment, surviving well past any other available solution.

EliteBPM complements the solutions provided by EliteB2IT, EliteITG and EliteEA, offering clients an end-to-end solution for their value-adding efforts. Organizations that manage a mature environment can utilize EliteBPM as a cost-effective and flexible means of improving or automating existing business and technology processes, while not having to reinvent the wheel.

Introducing EliteBPM! Manage your processes with this feature-rich business process management system

State of the art, Web 2.0 user interface, simplifies use and maximizes user experience

EliteBPM: Under the Hood

EliteBPM is an implementation of a complex workflow engine also known as a business process management system (BPMS).

In a general sense, a BPMS engine manages the movement of tasks through a work process. The workflow defines five attributes for a process:

1. Its structure
2. Order and assignment of tasks
3. Exchange of information or interaction between people and systems
4. Dependencies or how that information or interaction supports the tasks of the process
5. Management of the tasks and process

BPMS is not new to the market—many software solutions enable organizations to automate business processes. But EliteBPM provides more to customers than simple process automation. For example, EliteBPM comes with several software licensing options. Customers who purchase one of Elite Value Solutions' service offerings, such as EliteB2IT, receive free software licensing for EliteBPM.

Furthermore, EliteBPM offers an open application programming interface (API) and service library, which means the product can be extended and integrated into all types of environments. And EliteBPM is skinnable, so the application can take on the custom look-and-feel of your business.

EliteBPM Benefits

Technology can deliver only capabilities, but turning those capabilities into business benefits requires full engagement. EliteBPM can help you better realize the business benefits which IT can deliver back to the company:

- Free licensing option (with purchase of a service contract) provides a very cost-effective solution
- Identifying and automating complex processes that span companies, vendors, suppliers, business units, departments, people and systems lets you satisfy specific business objectives
- Upping productivity and improving systems surrounding business and IT processes (whether or not identified by EliteB2IT and EliteITG services) will lower costs and increase ROI
- Creating visibility into business activity and productivity during all phases of a process provides monitoring and analysis capabilities that otherwise would not be available to you
- Service library and open API provide a high degree of flexibility that enables you to 'custom-solve' complex problems and integrate with systems, suiting every business need
- Skinnable user interface provides the ability to create a suitable look and feel, thus maintaining the image of your organization
- Support for remote management lets you, in effect, "Go green" while lowering operation costs when employees work from home

As you can see, EliteBPM is all about value.

Our free licensing option plus the ability to extend and integrate through open APIs and a comprehensive service library add up to big savings and a big win for your business. Elite Value Solutions is committed to adding value to customers' IT investments. Find out how your company can be a beneficiary of this new way to integrate systems seamlessly.

EliteBPM Features

EliteBPM's extensive set of features raises the bar for BPM software and sets it apart from its competitors:

- Complete business process automation provides seamless interaction between people and systems
- **Flexible task assignment lets you assign tasks to systems, individual users, departments, vendors or any defined stakeholder; you can set up team-based task assignments for groups (e.g., a customer service department or an implementation team that must collaborate to accomplish tasks)**
- Business productivity management provides drill-down visibility into the various processes from a summary level down to task backlog reports
- **Email notifications keep you aware of task assignments and task or workflow operations**
- SMS and email access from mobile phones provides the mobility you need
- **A full-service library allows integration with any system based on open-system standards such as Web services; 'open-system standards support' lets other business applications or external systems (e.g., vendor systems) work together to accomplish higher level goals**
- Open API delivers extensible customization to suit the needs of any environment; this high degree of flexibility means you can completely customize your processes while ensuring that data can be sent by and received from any internal or external system
- **Skinnable user interface lets you create an application that is familiar to users in any business environment**
- 100% pure Web 2.0 application maximizes performance and user experience
